

SentinelAI Enterprise Security Report

Report: First Run Report

Generated: 2026-07-08 10:37:08 UTC

Executive Summary

The current cloud security posture reflects an excellent security score of 100, with an overall low risk level identified. Risk analysis indicates no critical, high, or medium severity findings. One low-severity finding was identified, detailing the root identity accessing iam.amazonaws.com once. No risks have been resolved at this time. The environment contains a total of one identity, specifically an AWS IAM user. There are no roles or service accounts identified. This identity is neither privileged nor dormant. The security graph analysis shows a small footprint with 3 total nodes and 2 relationships. Importantly, no attack paths were identified within the current configuration, and no single most connected identity was determined.
